

# Electric Strike

CA-TA5600-12DC

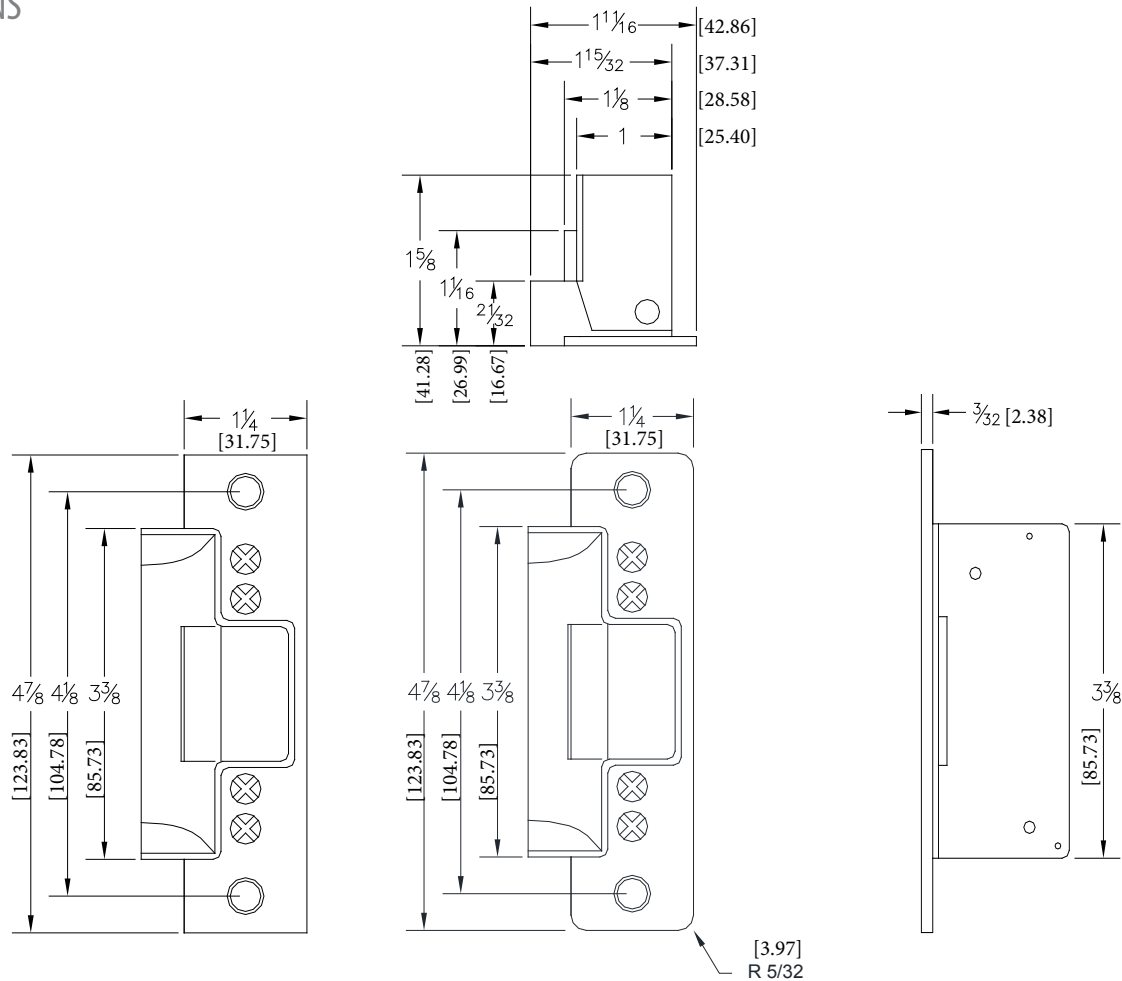

The CA-TA5600-12DC electric strike is intended for use with Adams Rite style deadlatches or cylindrical latches. It is for use on hollow metal or aluminum jambs. It comes with two standard 4 7/8" clear aluminum faceplates - one with square corners and one with radius corners.

The CA-TA5600-12DC electric strike is designed for use with access control systems for electronically locking and unlocking a door. Electrical actuation unlocks the strike jaw allowing the latchbolt to release so that the door can be opened without retracting the latch. This electric strike has been designed and built to provide years of trouble-free operation.
